

## Shower Doors & Enclosures

**NERVAL CORPORATION** Care & Maintenance documents provide guidelines on how to care for your NERVAL product. Failure to comply with NERVAL's Care & Maintenance documents voids warranty for Shower Doors & Enclosures and Shower Door Hardware.

### Maintenance

- Your shower door & enclosure should be cleaned with a squeegee or clean dry cloth after exposure to water. Using a hydrophobic surface coat on your glass can help make cleaning easier. Ask your Nerval representative about this option.
- Make sure your shower is properly ventilated. If using a steam shower, make sure to release the humidity after use.
- For shower doors with exposed tracks, it is recommended to wipe the track dry after every use.
- Do not open and close your shower door aggressively.
- Shower doors & enclosures are not designed to withstand extra weight. Never use tracks, support bars, glass panels, or any other shower door & enclosure component to support weight.

### Cleaners

- Do not use abrasive or acid- base cleaner when cleaning your shower door & enclosure. Powerful cleaners can scar the metal or glass of your door & enclosure. Nerval recommends a mixture of equal parts white vinegar and water, in a spray bottle.

### Are Nerval Shower Doors & Enclosures Watertight?

- No shower doors & enclosure are 100% watertight. Nerval uses high quality seals, installed by our experienced technicians, but this does not guarantee that no water will escape the shower door & enclosure. If water is being sprayed recklessly inside of the shower, chances are it will escape. Showers & enclosures are designed to serve the purpose of showering. Water is not meant to be intentionally sprayed directly at the seals and doors.
