

Sinks & Toilets

NERVAL CORPORATION Care & Maintenance documents provide guidelines on how to care for your NERVAL product. Failure to comply with NERVAL's Care & Maintenance documents voids product warranty.

Toilets

Like all heavy-use fixtures in your home, your toilet requires continuous cleaning and maintenance. Follow these simple steps:

1. Put on your cleaning gloves.
2. Moisten sponge with hot water and wipe off grime around the tank, lid, seat, base, and exterior of the bowl.
3. Apply a specially formulated cleaner to the interior of the bowl and let it soak in for a few minutes. Scrub off grime with a brush, using water from the bowl to activate suds. We recommend cleaning the toilet bowl manually and on a regular basis instead of using in-tank tablet cleaners. These tablets often cause erosion to gaskets and washers that keep your fixture running properly.
4. Flush the toilet. Continue to scrub as the water drains from the bowl.
5. Clean the rest of your toilet with disinfectant spray. Be sure to clean the handle thoroughly, as this is a place where germs can spread.

Sinks

1. General cleaning: You can clean most basic dirt and food waste from your sink with dishwashing detergent. If you need a little more power, simply rub your sink clean with a sponge soaked in a solution of baking soda and warm water. Remember to only use soft cloths when cleaning porcelain. Harsh, abrasive materials or excessive pressure can scratch and ruin the porcelain's finish.
2. Grease and soap scum: To get rid of grease and soap scum, scrub your sink with 1 tablespoon of ammonia mixed with 3-4 liters of hot water.
3. Coffee stains: Scrub away coffee stains with a damp washcloth dipped in baking soda.
4. Rust stains: Borax is great for getting rid of many stains on porcelain, including rust. Create a paste from ¼ cup of lemon juice and 1 cup of borax. Rub the paste onto the stains with a sponge and then rinse clean with warm water.

You can restore porcelain's shine by scrubbing it with white vinegar. Rinse or wipe (with a wet cloth) away the vinegar with cold water when you're done.
