

Custom Closets

NERVAL CORPORATION 's Custom Closets are easy to clean. However, there are some things to consider. Failure to follow NERVAL CORPORATION's care & maintenance guidelines will void warranty.

Routine Cleaning

For routine cleaning, a mild, water based cleanser will suffice to remove finger prints and dust. After cleaning, wipe down the surface with a slightly damp, soft microfiber cloth, followed by drying with a clean, soft cloth. It is important to not let moisture stand on laminate surfaces, as this is the leading cause of damaged laminate surfaces. Also, avoid using the following cleaning products: steel wool, acidic or abrasive cleaners, cleaner containing lye, acetone, thinner, or other products that are not considered mild, water based household cleaners.

Check the label of your cleaner to ensure it does not contain solvents such as the following: caustic soda, acetone, ethyl acetate, amyl acetate, glacial acetate acid, butyl acetate, butyl alcohol, ammonia, benzene, carbon tetrachloride, chlorinated solvents, chloroform, dichloromethane, cresols/phenols, gasoline, halogenated solvents, methyl alcohol, methyl ethyl ketone, ketones, thinners, toluene or xylene.

Door & Drawer Fronts

Using a damp, clean cloth, wipe down door and drawer fronts using a mixture of 5% mild soap and 95% water. After wiping, dry the fronts using a soft, clean microfiber cloth. If you're dusting your closet, use a dry microfiber cloth or a soft duster; do not use cleaners.

If your closet has high gloss laminate surfaces, be sure to make sure you use a microfiber cloth. This will significantly reduce the risk of leaving scratches on your door. Being that high gloss surfaces are easy to clean, cleaners are usually not needed. A damp microfiber cloth, followed by a dry wiping with a microfiber cloth, will get the job done. If a cleaner is needed for a more thorough cleaning, use a solution of water with only a few drops of mild dish detergent.

Glass Doors

Use a mixture of 10% vinegar and 90% clean water to clean your glass doors. Do not spray the mixture directly onto the glass. Spray the mixture on a soft, clean microfiber cloth, and then wipe down the glass gently. Do not use sharp or abrasive objects, like metal scrapers, blades, or steel wool on your glass doors.
